1. Effects of Losing Medicaid on Body Weight and Health Behaviors [JMP] [[SSRN Link](#)]

Abstract: Tennessee's 2005 Medicaid reform terminated public health insurance coverage for approximately 170,000 childless adults. Leveraging this policy-induced variation, I study the impact of losing public health insurance on body weight and related health behaviors. Using Behavioral Risk Factor Surveillance System (BRFSS) data from 1997 to 2010, I estimate comparative case study models that compare Tennessee's outcomes before and after the reform with those of data-driven control groups. The preferred synthetic difference-in-differences estimates suggest that the reform increased Body Mass Index by 0.37 points and the overweight or obesity prevalence ($BMI \geq 25$) by 4% among Tennessean childless adults. Examining health behaviors, I find evidence that reduction in moderate physical activity participation (e.g., brisk walking, gardening) and vegetable consumption contributed to the weight gain.

2. Unlocking Potential: The Effects of AP Exam Fee Waivers (with Cade Lawson)

Abstract: We study the effects of North Carolina's Advanced Placement (AP) exam fee waivers on AP course enrollment, exam taking, and exam performance. Using course-level administrative data and exploiting within student variation, we identify the causal effects while overcoming several limitations of prior research. We find no evidence that fee waivers increased AP enrollment. However, fee waivers increased the likelihood of an AP course leading to an exam by 4 percentage points and had no significant negative impact on pass rate. The gains were large among historically underperforming (non-White and non-Asian as well as economically disadvantaged) students, reducing the racial and socioeconomic gap in AP exam participation by one-third. Back-of-the-envelope cost-benefit analyses show that the intervention was highly cost-effective, especially for the historically underperforming groups.
