1. The Effects of Losing Medicaid on Body Weight and Health Behaviors [Job Market Paper]  
**Abstract:** Approximately 170,000 childless adults abruptly lost Medicaid coverage as a result of Tennessee's 2005 Medicaid reform. Leveraging this policy-induced variation in health insurance coverage, I investigate the impact of large-scale Medicaid disenrollment on body weight and health behaviors. Using Behavioral Risk Factor Surveillance System (BRFSS) data from 1997 to 2010, I estimate synthetic difference-in-differences models that compare Tennessee's outcomes before and after the reform with those of a data-driven, synthetic Tennessee. The findings suggest that the reform increased Body Mass Index (BMI) among Tennessean childless adults by 0.37 points, contributing to roughly 4% rise in the prevalence of overweight or obese individuals ( $BMI \geq 25$ ). The effects are strong among young (aged 20-39) as well as female childless adults, who likely experienced disproportionately large coverage loss due to the reform. Examining health behaviors, I find that decreased participation in moderate physical activity (e.g., cycling, swimming) and decreased inclusion of vegetables in diet following the reform partially explain the weight gain.
  2. The Effects Exam Fee Waivers on AP Participation and Performance (with Cade Lawson and Salma Ali)  
**Abstract:** We leverage policy-induced variation in the out-of-pocket cost of taking Advanced Placement (AP) exams and within student variation to examine the effects of North Carolina's AP exam fee waiver policy on AP course enrollment, exam taking, and exam performance. Our use of course-level administrative data and student fixed effects address several limitations of prior studies. We find that the fee waivers increase the likelihood of an AP enrollee to take the AP test, but does not decrease the probability of passing the test. In contrast to previous studies, we find no effect on AP course enrollment. We provide evidence that fee waivers reduce racial gap in AP exam taking and potential college credit accumulation.
